

P1815

Submitter Email: hleesmith@ieee.org

Type of Project: Modify Existing Approved PAR

PAR Request Date: 22-Apr-2010

PAR Approval Date: 17-Jun-2010

PAR Expiration Date: 31-Dec-2013

Status: Modification to a Previously Approved PAR

Root PAR: P1815 **Approved on:** 09-Dec-2009

Project Record: No Project Record

1.1 Project Number: P1815

1.2 Type of Document: Standard

1.3 Life Cycle: Full Use

2.1 Title: Standard for Electric Power Systems Communications - Distributed Network Protocol (DNP3)

3.1 Working Group: Standard for Electric Power Systems Communications Distributed Network Protocol (DNP3) Working group (PE/T&D/Dist-DNP3)

Contact Information for Working Group Chair

Name: H Smith

Email Address: hleesmith@ieee.org

Phone: 925 735 8262

Contact Information for Working Group Vice-Chair

None

3.2 Sponsoring Society and Committee: IEEE Power & Energy Society/Transmission and Distribution (PE/T&D)

Contact Information for Sponsor Chair

Name: Thomas Grebe

Email Address: tgrebe@ieee.org

Phone: 865-470-9222

Contact Information for Standards Representative

Name: Karl Mortensen

Email Address: kmortens@charter.net

Phone: 763-241-2365

4.1 Type of Ballot: Individual

4.2 Expected Date of submission of draft to the IEEE-SA for Initial Sponsor Ballot: 04/2010

4.3 Projected Completion Date for Submittal to RevCom: 06/2010

5.1 Approximate number of people expected to be actively involved in the development of this project: 15

5.2 Scope: This document specifies the DNP3 protocol structure, functions, and application alternatives. In addition to defining the structure and operation of DNP3, the standard defines three application levels that are interoperable. The simplest application is for low-cost distribution feeder devices, and the most complex is for full-featured master stations. The intermediate application level is for substation and other intermediate devices. The protocol is suitable for operation on a variety of communication media consistent with the makeup of most electric power communication systems.

The standard consists of several clauses each related to an application or function.

Old Scope: This document specifies the Distributed Network Protocol version 3 (DNP3) protocol structure, functions and application alternatives and the corresponding conformance test procedures. In addition to defining the structure and operation of DNP3, the standard defines three application levels that are interoperable. The simplest application is for low cost distribution feeder devices and the most complex is for full featured master stations. The intermediate application level is for substation and other intermediate devices.. The protocol is suitable for operation on, a variety of communication media consistent with the makeup of most .electric power communication systems.

The standard consists of several sections each related to an application or function.

5.3 Is the completion of this standard dependent upon the completion of another standard: No

5.4 Purpose: The purpose of this standard is to document and make available the specifications for the DNP3 protocol. While a

Old Purpose: The purpose of this standard is to document and make available the specifications for the DNP3 protocol. While a

primary focus of this protocol is the Electric Utility Industry, other industries that deliver Energy and Water are also using DNP3. The intent of this DNP3 standard is to meet the goal established by the National Institute of Standards and Technology (NIST) for a Smart Grid protocol:

- Provides a protocol standard from a recognized standard institution
- Provides interoperability with hundreds of operational systems and thousands of devices
- Provides cyber security based on IEC/TS 62351-5
- Provides Device data profiles in a format that can be mapped to IEC 61850 Object Models

Vendors may use this standard to implement and test the protocol in their products and be assured of interoperability. Users may use the document to specify the features they wish to apply. System Integrators may use this standard to assist in system integration and testing.

primary focus of this protocol is the Electric Utility Industry, other industries that deliver Energy and Water are also using DNP3. The intent of this DNP3 standard is to meet the goal established by NIST for a Smart Grid protocol:

- Provides a protocol standard from a recognized standard institution
- Provides interoperability with 100s of operational systems and 1000s of devices
- Provides cyber security based on IEC 62351-5
- Provides Device data profiles in a format that can be mapped to IEC 61850 Object Models
- Vendors may use this standard to implement and test the protocol in their products and be assured of interoperability. Users may use the document to specify the features they wish to apply. System Integrators can use the documents to assist in system integration and testing.

5.5 Need for the Project: To provide a Standard of the DNP3 Protocol for use in the Smart Grid Applications,

5.6 Stakeholders for the Standard: Electric Utilities and other End Users, Manufacturers and Vendors

Intellectual Property

6.1.a. Is the Sponsor aware of any copyright permissions needed for this project?: Yes

If yes please explain: Permission has been requested and received from IEC 62351-3 Edition 1

6.1.b. Is the Sponsor aware of possible registration activity related to this project?: No

7.1 Are there other standards or projects with a similar scope?: No

7.2 International Activities

a. Adoption

Is there potential for this standard (in part or in whole) to be adopted by another national, regional or international organization?: No

b. Joint Development

Is it the intent to develop this document jointly with another organization?: No

c. Harmonization

Are you aware of another organization that may be interested in portions of this document in their standardization development efforts?: No

8.1 Additional Explanatory Notes (Item Number and Explanation): slightly modifying the scope and purpose.
