

PC57.116

Submitter Email: grhoffman@advpowertech.com

Type of Project: Revision to IEEE Standard C57.116-1989

PAR Request Date: 11-Jul-2011

PAR Approval Date: 10-Sep-2011

PAR Expiration Date: 31-Dec-2015

Status: PAR for a Revision to an existing IEEE Standard

Root Project: C57.116-1989

1.1 Project Number: PC57.116

1.2 Type of Document: Guide

1.3 Life Cycle: Full Use

2.1 Title: Guide for Transformers Directly Connected to Generators

Changes in title: ~~IEEE~~ Guide for Transformers Directly Connected to Generators

3.1 Working Group: Power Transformers - Directly Connected GSU Working Group (PE/TR/PwrTrans-WGC57.116)

Contact Information for Working Group Chair

Name: Gary Hoffman

Email Address: grhoffman@advpowertech.com

Phone: 973 328 3300

Contact Information for Working Group Vice-Chair

Name: William Griesacker

Email Address: wgriesacker@verizon.net

Phone: 724-873-2275

3.2 Sponsoring Society and Committee: IEEE Power and Energy Society/Transformers (PE/TR)

Contact Information for Sponsor Chair

Name: James Smith

Email Address: edsmith@h-jenterprises.com

Phone: 636.677.3421

Contact Information for Standards Representative

Name: William Bartley

Email Address: william_bartley@hsb.com

Phone: 860 722 5483

4.1 Type of Ballot: Individual

4.2 Expected Date of submission of draft to the IEEE-SA for Initial Sponsor Ballot: 11/2014

4.3 Projected Completion Date for Submittal to RevCom: 10/2015

5.1 Approximate number of people expected to be actively involved in the development of this project: 50

5.2 Scope: This guide describes selection and application considerations for the unit power transformer and unit auxiliaries power transformer. Consideration is given to connections that include direct connection and connections through generator circuit breakers and load-break switches. The considerations referred to in this guide apply to hydroelectric and thermal electric generating stations. Various power transformer connections and possible operating problems under normal and abnormal conditions are treated. Phasing procedures, basic impulse insulation level selection, and loading practices are not covered.

Changes in scope: This guide describes selection and application considerations for the unit **power** transformer and unit auxiliaries **power** transformer. Consideration is given to connections that include direct connection and connections through generator **circuit** breakers and load-break switches. The considerations referred to in this guide apply to hydroelectric and thermal electric generating stations. Various **power** transformer connections and possible operating problems under normal and abnormal conditions are treated. Phasing procedures, basic impulse insulation level selection, and loading practices are not covered.

5.3 Is the completion of this standard dependent upon the completion of another standard: No

5.4 Purpose: The terminology, function, application, theory of operation and protection, and design of unit power transformers, unit auxiliary power transformers are not covered by existing transformer standards and guides. The purpose of this document is to provide guidance for specifying, designing, and applying these types of power transformers.

Changes in purpose: ~~This~~The document terminology, ~~did~~function, application, theory of operation and protection, and design of unit power transformers, unit auxiliary power transformers are not ~~contain~~covered ~~by~~ Purpose existing clause transformer standards and guides. The purpose of this document is to provide guidance for specifying, designing, and applying these types of power transformers.

5.5 Need for the Project: C57.116 has been proven to be a useful document to the producers and users of the material contain therein. It has been decided by the Transformers Committee that the document be reviewed and revised after

receiving comments from a reaffirmation ballot. The reaffirmation was withdrawn and hence this project is thereby requested.

5.6 Stakeholders for the Standard: Stakeholders include electric utilities such as certain government owned utilities, Cooperatives, Investor Owned Utilities, non-regulated power producers, and industrial firms capable of generating power, manufacturers of power transformers, substation class circuit breakers, load interrupting switches, generators, and iso-phase ducts. Specifiers and designers of the above are also stakeholders.

Intellectual Property

6.1.a. Is the Sponsor aware of any copyright permissions needed for this project?: No

6.1.b. Is the Sponsor aware of possible registration activity related to this project?: No

7.1 Are there other standards or projects with a similar scope?: No

7.2 Joint Development

Is it the intent to develop this document jointly with another organization?: No

8.1 Additional Explanatory Notes (Item Number and Explanation):
